

## Qualitative Initial Interviews for Investigations in Learning Analytics

### Introduction Script

👉 Level 4 Project Dissertation - 2023/24

Elisabet Tammjarv

Welcome! I'd like to contextualise the dynamic of this interview - as this is for qualitative research purposes, our interview follows a casual dynamic wherein going off topic is welcomed and there is no such thing as irrelevant information. I'm interested in exploring as many aspects of learning analytics from our student population's perspective as possible, and your narrative is invaluable data for me. Despite that, I do have some prompts in mind regarding the aims of the interview, and may be jotting down points to come back to later on.

The main aims of this initial qualitative interview are to:

1. Outline a frame of reference for students current knowledge of, experiences with and expectations for the usage of learning analytics within the University of Glasgow.
2. Explore student concerns regarding current practical and future theoretical applications of learning analytics.
3. Establish a set of requirements through the collaborative use of MoSCoW framework across Interviews.

I will be recording this interview. Any data collected will be kept fully anonymous. Please indicate if you would like a record of your transcript to be given to you afterwards.

You are also welcome to withdraw from the interview any time during this discussion. If you do so, then it will not be possible for you to be debriefed about the further purposes of this interview.

Before we begin I would like to reassure you that we are not evaluating your character nor abilities through this process. Please feel free to ask questions regarding the process anytime - I'm always willing to discuss the reasoning behind specific prompts.

Do you agree to take part in this interview, and do I have your expressed permission to record this interview?

Do you have any questions before we start?

### Debrief Script

👉 Now that we've come to the end of our interview I'd like to re-iterate the main aims:

1. Outline a frame of reference for students current knowledge of, experiences with and expectations for the usage of learning analytics within the University of Glasgow.
2. Explore student concerns regarding current practical and future theoretical applications of learning analytics.

3. Establish a set of requirements through the collaborative use of MoSCoW framework across Interviews.

The data gathered here today will be processed using a mixture of discourse, narrative and grounded theory analysis; I will be extracting information mainly surrounding key themes concerning the potential change in relationship between students-educators-material, implementation goals and features, and the ethics surrounding learning analytics. This and the collaborative MoSCoW framework will be used for the second of my research where I will be analysing various prototypes of system-wide Learning Analytics implementations.

Is there anything you'd like to ask about or comment on so far?

The recommended line of contact is:

Me [Elisabet Tammjarv], via email address: [2554321T@glasgow.ac.uk](mailto:2554321T@glasgow.ac.uk).

The module co-ordinator for this project: [Graham.McDonald@glasgow.ac.uk](mailto:Graham.McDonald@glasgow.ac.uk).

Don't hesitate to email me if you have any further questions surrounding this interview and/or want to take part in Phase 2! And thank you for all of your help!
